Lesson plan

Case Studies and Final Project Presentations

Bloom's levels: Create, Evaluate

Objectives

- Apply financial modeling skills to real-world case studies
- Develop and present a final project that demonstrates mastery of financial modeling concepts
- Receive feedback and evaluation from instructors and peers

Prerequisites

- Model Audit and Risk Management

Key points

Case Studies and Final Project Presentations

Duration: 180 minutes

Bloom's levels: Create, Evaluate

Objectives

- Apply financial modeling skills to real-world case studies
- Develop and present a final project that demonstrates mastery of financial modeling concepts
- Receive feedback and evaluation from instructors and peers

Prerequisites

- Model Audit and Risk Management

Agenda

1. Introduction and Review (10 minutes)
2. Case Studies (40 minutes)
3. Final Project Presentations (60 minutes)
4. Break and Energizer (10 minutes)
5. Group Discussion and Feedback (50 minutes)
6. Conclusion and Next Steps (10 minutes)

Introduction and Review (10 minutes)

Welcome students and briefly review the objectives and prerequisites for the session. Use an analogy to introduce the concept of financial modeling: "Just like a chef uses a recipe to create a delicious dish, financial modelers use financial models to create a recipe for business success."

Key points to cover:

- Recap of financial modeling concepts
- Importance of case studies and final project presentations

Case Studies (40 minutes)

Present 2-3 real-world case studies that demonstrate the application of financial modeling concepts. Use examples such as:

- Business valuation using discounted cash flow
- Scenario planning for a company's expansion

Use an analogy to explain the concept of scenario planning: "Just like a GPS navigation system provides different routes to a destination, scenario planning provides different scenarios for a company's future."

Key points to cover:

- Application of financial modeling concepts to real-world scenarios

- Importance of considering multiple scenarios and uncertainties

Anticipated learner questions:

- How do we handle uncertainty in financial modeling?
- What are the limitations of financial modeling in real-world scenarios?

Answers:

- We handle uncertainty by using probability distributions and sensitivity analysis.
- Financial modeling has limitations, such as assumptions and data quality, but it provides a framework for making informed decisions.

Final Project Presentations (60 minutes)

Have students present their final projects, which demonstrate their mastery of financial modeling concepts. Encourage students to use visual aids and provide feedback to their peers.

Key points to cover:

- Application of financial modeling concepts to a real-world project
- Importance of clear communication and presentation skills

Anticipated learner questions:

- How do we evaluate the success of a financial model?
- What are the key components of a good final project presentation?

Answers:

- We evaluate the success of a financial model by comparing its outputs to actual results and assessing its limitations.
- A good final project presentation includes clear communication, visual aids, and a demonstration of financial modeling concepts.

Break and Energizer (10 minutes)

Take a break and have students participate in an energizer activity, such as a financial modeling-themed game or a group discussion on a current event related to finance.

Group Discussion and Feedback (50 minutes)

Have students participate in a group discussion on the case studies and final project presentations. Encourage students to provide feedback to their peers and discuss the following topics:

- Challenges and limitations of financial modeling
- Best practices for financial modeling and presentation

Use an analogy to explain the concept of feedback: "Just like a sports team uses feedback from coaches and players to improve their performance, we use feedback from peers and instructors to improve our financial modeling skills."

Key points to cover:

- Importance of feedback and peer review
- Best practices for financial modeling and presentation

Anticipated learner questions:

- How do we handle feedback and criticism?
- What are the key takeaways from the case studies and final project presentations?

Answers:

- We handle feedback and criticism by being open-minded, asking questions, and using it as an opportunity to learn and improve.
- The key takeaways from the case studies and final project presentations include the application of financial modeling concepts to real-world scenarios, the importance of considering multiple scenarios and uncertainties, and the need for clear communication and presentation skills.

Conclusion and Next Steps (10 minutes)

Summarize the key points covered in the session and provide next steps for students. Use an analogy to conclude the session: "Just like a financial model provides a roadmap for business success, this session has provided a roadmap for your future studies and career in finance."

Key points to cover:

- Recap of key concepts and takeaways

- Next steps for students, including additional resources and support.
